Project Overview

The NEU Library Visitor Management System is a web-based application designed to digitally record and manage library visitors. The system allows users to check in through an online form, while administrators can monitor visitor records and statistics through an admin dashboard. It replaces traditional manual logbooks with a more efficient digital system that can be accessed through computers or mobile devices.

System Features

- **Registration System** – New users must create an account using their institutional email before accessing the system. They are required to input their name, college, program, and visitor type.
- **Login System** – Users can log in using manual authentication. Only emails ending with @neu.edu.ph are allowed to access the system.
- **Library Check-in** – Users can submit their visit through an online form. A QR code is provided for easy mobile access.
- **Purpose Input System** – Users can select predefined purposes (Study, Research, Borrow Books) or input a custom purpose under Others.
- **Visitor Logs** – All visits are stored in the database and displayed in real-time, sorted by most recent.
- **Visitor Search** – Administrators can search visitor records using the search bar.
- **Filter Statistics** – Admins can filter records by date, purpose, college, program, and visitor type. The "Others" filter includes all custom purposes entered by users.
- **Admin Dashboard** – Displays visitor statistics including daily, weekly, and monthly counts, along with charts.
- **Block and Unblock Users** – Admins can restrict or restore user access.
- **QR Code Access** – Users can scan a QR code to open the system on mobile devices.

Technologies Used

Programming Languages	
HTML	Structures the web pages
CSS	Designs and styles the interface
JavaScript	Handles system logic and interactivity
Libraries	
Chart.js	Used for data visualization (charts in admin dashboard)
QRCode.js	Generates QR code for mobile access
Firebase Services	
Authentication	Handles user login and registration
Cloud Firestore	Stores user data and visitor records
Development Tools	
Visual Studio Code	Used for coding and development
GitHub	Used for version control, code management, and deployment of the web application

How to Access the Admin Dashboard

The system has predefined administrator accounts. To access the admin dashboard:

1. Use any of the registered admin accounts.
    - admin@neu.edu.ph – password: 123456
    - librarian@neu.edu.ph – password: librarian
    - jcesperanza@neu.edu.ph – password: esperanza
2. Log in using the admin email and password.
3. The system will automatically detect the account as an admin.
4. You will be redirected to the Admin Dashboard.

How to Use the Website

For First-Time Users (Registration Required)

1. Access the Website
    - Open the website using the provided link or scan the QR code.
2. Register an Account
    - Click Register Account
    - Fill in the required details:

        - Full Name
        - Institutional Email (@neu.edu.ph)
        - Password
        - Visitor Type (Student or Faculty)
        - College
        - Program (for students)
    - Click Submit
3. Login
    - After registration, log in using your email and password.

For Returning Users

1. Login
    - Enter your registered NEU email and password.
2. Fill Out the Check-In Form
3. Submit Visit
    - Click Check-In to record your visit.

How to Use the Admin Dashboard

1. Login as Admin
    - Log in using an admin account to access the dashboard.
2. View Statistics
    - View real-time data:
        - Visitors Today
        - Visitors This Week
        - Visitors This Month
3. View Charts
    - Displays Visitors by College
    - Helps analyze library usage distribution
4. Use Filters
    - Filter visitor records by:
        - Date range
        - Purpose
        - College
        - Program
        - Visitor Type
5. View Visitor Logs

- Displays all visit records
- Sorted by most recent

6. Search Visitors
   - Use the search bar to quickly find specific users
7. Block / Unblock Users
   - Block – Prevents user from submitting visits
   - Unblock – Restores access
